

REMOTE SAFETY AND PROCESS MONITORING

*Monitor smarter.
Prevent disasters.*

Reduce your risk of a serious fire.

When heat builds up in compost, fodder or volatile waste, it's not just a risk – it's a potential catastrophe.

RHINO delivers rugged, smart sensors and web-based dashboards that assist in early warning and prevention.

- ✓ **Automated temperature alerts**
SMS & email alerts aid in catching issues before they get bigger.
- ✓ **Remotely monitor hazards**
An online dashboard that gives you a watchful eye - even at your desk.
- ✓ **Learn from your material**
Analyse historical data and react to temperature changes earlier.
- ✓ **Audit-ready data logs**
All your data, exportable and shareable.

Smarter organic processing

Help take the guesswork out of organics composting with round the clock temperature logging.

Remotely make better informed decisions about on-site activity and optimise your processing.

Reduce processing time with active monitoring

TOUGH SMART PROVEN

Built for Australian environments

The RM2 Automated Temperature Monitor has been designed, developed and built in Australia to tough it out in harsh isolated conditions.

Reduce unnecessary labour costs and wasted time taking manual temperatures - remotely monitor a wide range of materials around the clock with the touch of a button.

**Get better data.
Make better decisions.**
